

6 factors that will determine the right IVMS solution for you

Make compliance a priority

1

AFFORDABILITY

If you are after affordability, then our Basic IVMS unit will provide nearly all the functionality for base IVMS requirements at less than half the cost of our higher end unit. .

2

FUNCTIONALITY

It will depend on your specific use case scenario, but in most cases our full featured mine spec-IVMS will be capable of meeting the changeable nature of a mine site specification.

3

PATCHY CONNECTIVITY

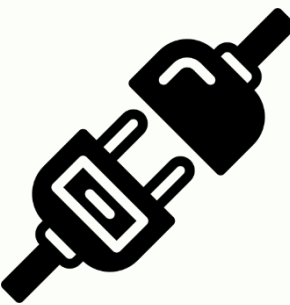

Case 1: If there are no immediate safety requirements needed, you can utilise a standard IVMS as it saves trip data when out of coverage. Case 2: If there is a safety requirement to your use case then it might be worth considering one of our cellular booster options which will increase your coverage range.

4

NO CONNECTIVITY

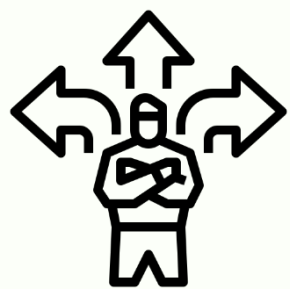

If you are working remotely out coverage and only come into coverage once a month or never at all, then the only possibility is to add an iridium edge head to your mine spec IVMS unit.

5

PORTABILITY

If you are a contractor, who will be on site for a limited time doing some work or if you are using rental vehicles or are using personal vehicles then Digicore's portable IVMS offers all the pickups to remain compliant without having to permanently install the unit into the vehicle.

6

FLEXIBILITY

Contract workers often need something adaptable, as they can visit multiple site, each with their own specifications. Digicore's mine spec IVMS is capable of meeting a huge variety of different requirements from standard 4G GSM comms, to satellite based comms and even utilising Bluetooth gateways making it an incredibly versatile option .
